

Real-Time Operating System (Day 3 Lab)

Jong-Chan Kim

Graduate School of Automotive Engineering

국민대학교
KOOKMIN UNIVERSITY

17-1. Loss (공유 자원 data loss 확인)

- Task1: Low priority, AUTOSTART
- Task2: High priority, 1 ms 주기 실행
- 공유 전역 변수 (volatile unsigned long shared)
 - Task1의 루프에서 shared++
 - Task2 주기적으로 반복 실행하며 shared ++
- 양 쪽에서 더한 숫자가 모두 유지되는지 확인
- Task와 ISR 사이에서도 같은 문제가 발생하는지 확인

17-1. Loss

```
int main(void)
{
    osEE_tc_stm_set_clockpersec();
    osEE_tc_stm_set_sr0(1000U, 1U);
```

bsw.c

```
#include "bsw.h"
volatile unsigned long shared = 0;
```

```
TASK(Task1)
{
    unsigned long i;
    printfSerial("Task1 Begins...\n");
    for (i = 0; i < 20000000; i++) {
        shared++;
    }
    printfSerial("Added 20000000 to shared\n");
    printfSerial("counter = %lu\n", shared);
    printfSerial("Task1 Finishes...\n");
    TerminateTask();
}
```

```
TASK(Task2)
{
    static unsigned long i = 0;
    if (i < 500) {
        shared++;
    } else if (i == 500) {
        printfSerial("Added 500 to shared\n");
    }
    i++;
    TerminateTask();
}
```

17-1. Loss

- Resource를 이용해서 Integrity Loss 문제 해결 필요

```
.....  
...OS Starts...  
.....  
Task1 Begins...  
Added 500 to shared  
Added 20000000 to shared  
counter = 20000256  
Task1 Finishes...  
█
```

20000000 + 500 = 20000256(!!!)

17-2. No Loss

- OSEK의 RESOURCE 기능을 이용하여 Data Loss 문제 해결

```
GetResource(S1);  
shared++;  
ReleaseResource(S1);
```

```
RESOURCE S1 {  
    RESOURCEPROPERTY = STANDARD;  
};
```

...

```
TASK Task1 {  
    PRIORITY = 1;  
    STACK = SHARED;  
    SCHEDULE = FULL;  
    AUTOSTART = TRUE;  
    ACTIVATION = 1;  
    RESOURCE = S1;  
};
```

17-2. No Loss

- Data Integrity 문제 해결

```
.....  
...OS Starts...  
.....  
Task1 Begins...  
Added 500 to shared  
Added 20000000 to shared  
counter = 20000500  
Task1 Finishes...  
█
```

$20000000 + 500 = 20000500(!!!)$

18. Mutex

Waiting/Wakeup 을 위
해 Event 지정 필요

• mutex.c

```
#include "ee.h"  
#include "bsw.h"  
#include "mutex.h"
```

```
void InitMutex(MutexType *mutex, EventMaskType event)  
{  
    mutex->flag = UNLOCKED;  
    mutex->waiting_task = 0;  
    mutex->event = event;  
}
```

```
void GetMutex(MutexType *mutex)  
{  
    if (mutex->flag == LOCKED) {  
        printfSerial("  --> BLock");  
        GetTaskID(&(mutex->waiting_task));  
        WaitEvent(mutex->event);  
    }  
    mutex->flag = LOCKED;  
}
```

```
void ReleaseMutex(MutexType *mutex)  
{  
    if (mutex->flag == LOCKED) {  
        mutex->flag = UNLOCKED;  
        if (mutex->waiting_task != 0) {  
            SetEvent(mutex->waiting_task, mutex->event);  
        }  
    }  
}
```

**PCP 없이 Mutex 사용할 경우 문제점을
확인하기 위한 Dummy 구현**

18. Mutex

- mutex.h

```
#ifndef MUTEX_H_
#define MUTEX_H_

#define LOCKED    1
#define UNLOCKED  0

typedef struct _MutexType {
    int flag;
    EventMaskType event;
    TaskType waiting_task;
} MutexType;

void InitMutex(MutexType *mutex, EventMaskType event);

void GetMutex(MutexType *mutex);

void ReleaseMutex(MutexType *mutex);

#endif /* MUTEX_H_ */
```

18. Mutex

- Mutex 선언
- Timer ISR 이용
 - Mutex 초기화
 - Task Activation
- Mutex의 동작 확인

```
MutexType s1;

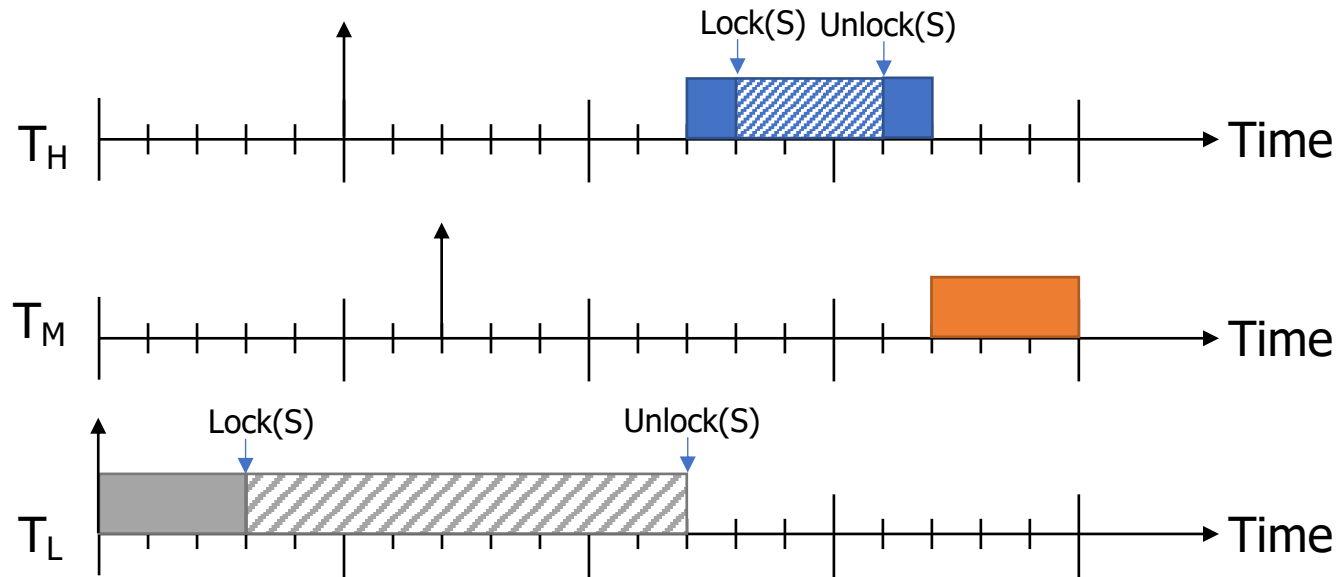

ISR2(TimerISR)
{
    osEE_tc_stm_set_sr0_next_match(1000000U);
    static long c = -5;
    printfSerial("\n%4ld: ", ++c);
    if(c == -4) {
        InitMutex(&s1, Event1);
    } else if (c == 0) {
        ActivateTask(TaskL);
    } else if (c == 5) {
        ActivateTask(TaskH);
    }
}
```

19-1. Priority Inversion

- 아래 스케줄 재현하기
- PCP가 적용된 RESOURCE를 이용하여 스케줄 변화 확인

19-2. No Priority Inversion

20-1. Deadlock

- Deadlock 재현하기
- PCP가 적용된 RESOURCE를 이용하여 Deadlock 해결

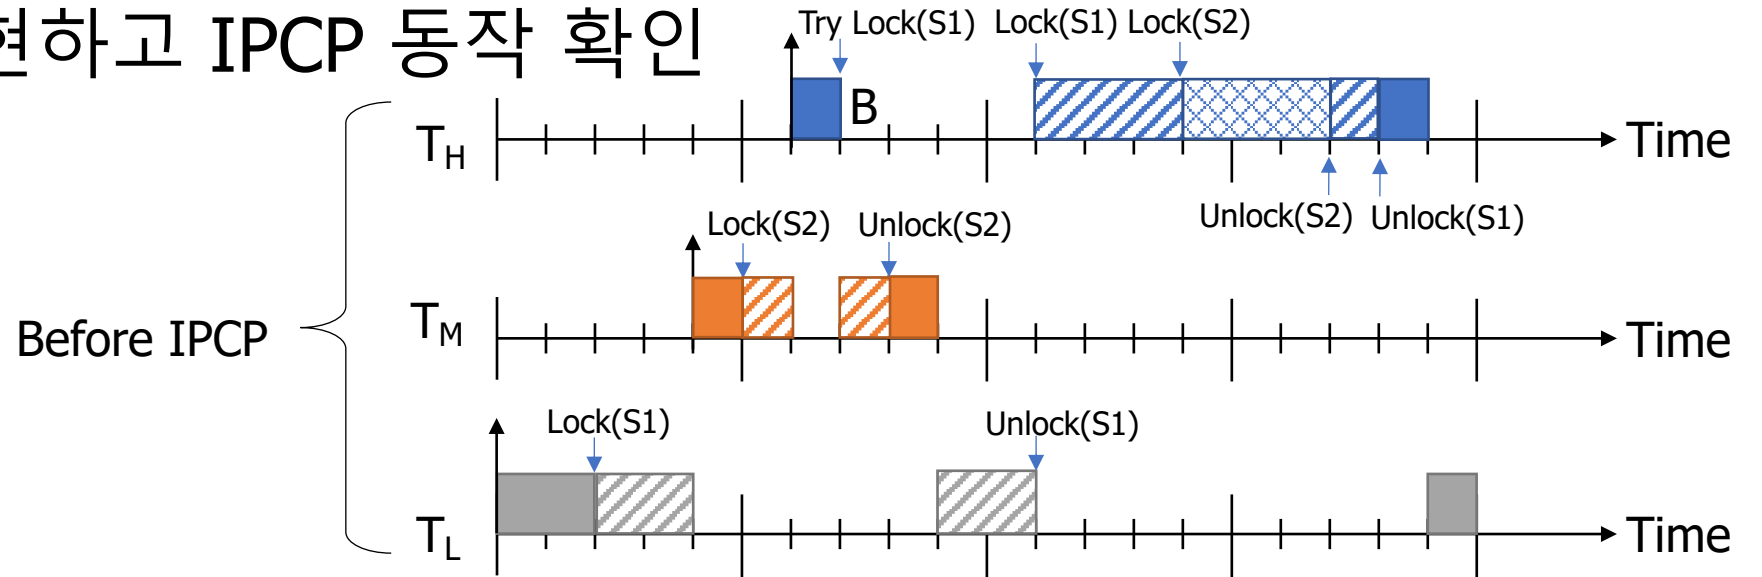

20-2. No Deadlock

21. Before/After IPCP

- 아래 스케줄 재현하고 IPCP 동작 확인

Questions
