

# Real-Time Operating System (Day 1 Lab)

**Jong-Chan Kim** 

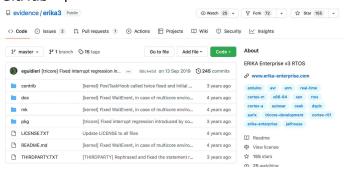

**Graduate School of Automotive Engineering** 

## **Erika Enterprise**

- 이탈리아 EVIDENCE에서 개발된 오픈소스 OSEK/VDX RTOS
- 듀얼 라이센스 정책 (오픈소스 라이센스 + 상용 라이센스)
- RTOS 연구 및 교육에 널리 사용
- GitHub 리포

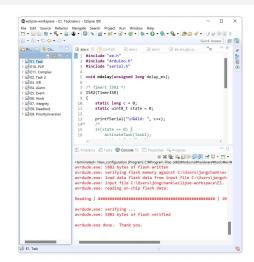

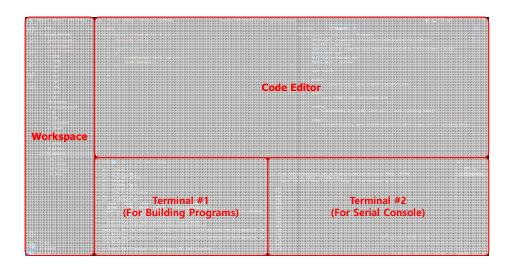

## Eclipse 기반 IDE (old)

- 프로젝트 생성
- OIL 파일, C/C++ 파일 편집
- 프로젝트 빌드
- 실행파일 다운로드

• ..

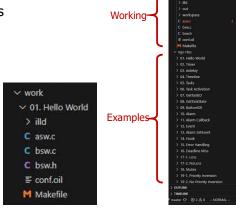

# Visual Studio Code 기반 개발환경 (new)

## Workspace

- Directory Structure
  - rtos\_workspace: working directory
  - ngv-rtos-master: example source files
- Example Projects Directory Structure
  - -illd/:Infineon Low LevelDriver
  - -asw.c:Application SW code
  - bsw.c: Basic SW code
  - -bsw.h:Basic SW header
  - conf.oil: OIL configuration file
  - Makefile: Top-level Makefile

#### **Workflow**

- Basic Workflow
  - 1) Copy a project (e.g., 01. Hello World) from to working directory
  - 2) Edit source files (.C or .H) and OIL files
  - 3) Build
- Build Process (in Terminal #1)
  - 1) cd 01. Hello World\
  - 2) make config
    - · Generate OS kernel files from conf.oil
  - 3) make
    - Generate an executable file

#### **Generated Files**

- erika/
  - OS source files
- out/
  - Generated files from the OIL file
  - Object files
  - -Executable (ELF) file (erika3app.elf)

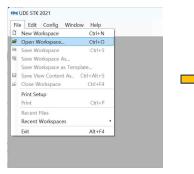

#### **Serial Console**

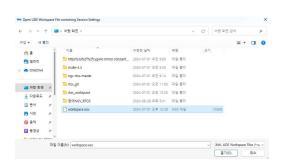

- 장치관리자에서 COM 포트 확인 (e.g., COM4)
- pyserial-miniterm 이용하여 시리얼 콘솔 시작 (Terminal #2)

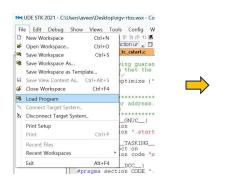

- File → Open Workspace
- 바탕화면의 workspace.wsx 열기

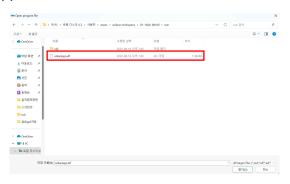

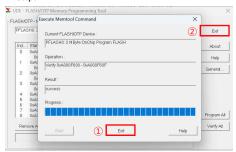

- File → Load Program
- 프로젝트 폴더의 out/erika3app.elf 열기

Step3

- 프로그램 실행 (run)
- 기존 프로그램 실행중일 경우 reset 후 실행

```
run
                                               reset

                     0~8000 0000
```

#### 01. Hello World

- 00. Template 복사
- asw.c에 TASK 추가
- OIL 파일에 TASK 추가
- printfSerial() 함수 사용 (시리얼 콘솔 출력)

```
#include "bsw.h"

TASK(Task1)
{
    printfSerial("Hello World\n");
    TerminateTask();
}
```

```
변경시에만
$ make config
$ make
```

Make config는 OIL

```
TASK Task1 {
    PRIORITY = 1;
    STACK = SHARED;
    SCHEDULE = FULL;
    AUTOSTART = TRUE;
    ACTIVATION = 1;
};

자동
```

#### 01. Hello World

- OS 시작 후
- Hello World 출력

#### 02. Timer

- C 파일에 ISR2로 TimerISR 추가
- OIL 파일에 TimerISR 추가 Category 2

```
| 1초 뒤 | interrupt 등록 | ISR2(TimerISR) | | osEE_tc_stm_set_sr0_next_match(1000000U); | printfSerial("Timer\n"); | }
```

```
ISR TimerISR {
   CATEGORY = 2;
   SOURCE = "STMØSRØ";
   PRIORITY = 2;
};
```

#### 02. Timer

• Hello World 출력후 Timer 반복

## 03. mdelay

• mdelay 함수 이용 3초 실행시간

```
TASK(Task1)
{
    printfSerial("Hello World\n");
    mdelay(3000);
    printfSerial("Goodbye World\n");
    TerminateTask();
}
```

#### 04. Timeline

• TimerISR 이용 초단위 Timeline 출력

```
ISR2(TimerISR)
{
    static long c = 0;
    osEE_tc_stm_set_sr0_next_match(1000000U);
    printfSerial("\n%4ld: ", c++);
}
```

## 05. Tasks

```
TASK(Task1)
    printfSerial("Task1 Begins...");
   mdelay(3000);
    printfSerial("Task1 Finishes...");
    TerminateTask();
TASK(Task2)
    printfSerial("Task2 Begins...");
   mdelay(3000);
    printfSerial("Task2 Finishes...");
    TerminateTask();
```

• 우선순위 2의 Task2 추가

```
클수록 높은
                      우선순위
TASK Task2 {
   PRIORITY = 2;
   STACK = SHARED:
   SCHEDULE = FULL;
   AUTOSTART = TRUE;
   ACTIVATION = 1;
};
```

#### 05. Tasks

- Task2가 먼저 시작
- Task2 종료 후 Task1 시작
- 우선순위를 바꾼다면?

## **06. Task Activation**

```
ISR2(TimerISR)
                                                   TASK(Task2)
    static long c = -4;
                                                       printfSerial("Task2 Begins...");
    osEE tc stm set sr0 next match(1000000U);
                                                       mdelay(3000);
   if(c == 0)
                                                       printfSerial("Task2 Finishes...");
       ActivateTask(Task1);
                                                       TerminateTask();
    printfSerial("\n%4ld: ", c++);
                                                   TASK Task1 {
TASK(Task1)
                                                       AUTOSTART = FALSE;
    printfSerial("Task1 Begins...");
    mdelay(3000);
                                                   };
    ActivateTask(Task2);
    mdelay(3000);
                                                   TASK Task2 {
    printfSerial("Task1 Finishes...");
    TerminateTask();
                                                       AUTOSTART = FALSE;
```

**}**;

## **06. Task Activation**

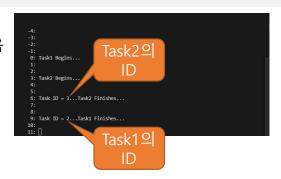

- Timeline -4부터 카운트다운
- Task2의 Task1 선점 확인
- ActivateTask 위치 바꾸면?
- 우선순위가 바뀌면?
- ChainTask 활용
- Task3까지 만들어서 연쇄 실행

#### 07. GetTaskID

```
TASK(Task1)
                                               TASK(Task2)
    TaskType id;
                                                   TaskType id;
    printfSerial("Task1 Begins...");
                                                   printfSerial("Task2 Begins...");
   mdelay(3000);
                                                   mdelay(3000);
   ActivateTask(Task2);
                                                   GetTaskID(&id);
    mdelay(3000);
                                                   printfSerial("Task ID = %d...", id);
   GetTaskID(&id);
                                                   printfSerial("Task2 Finishes...");
    printfSerial("Task ID = %d...", id);
                                                   TerminateTask();
    printfSerial("Task1 Finishes...");
    TerminateTask();
```

#### 07. GetTaskID

- 자연수 Task ID 확인
- Unique ID일 뿐 정의된 의미 없음

## 08. GetTaskState

```
TASK(TaskM)
                                     void printState(TaskType id) {
                                         TaskStateType state;
    printState(Task1);
    printState(Task2);
                                         if (GetTaskState(id, &state) == E OK) {
                                             switch (state) {
                                                 case SUSPENDED:
    TerminateTask();
                                                     printfSerial("%d: suspended...", id);
                                                     break:
                                                 case READY:
                                                     printfSerial("%d: ready...", id);
                                                     break:
TASK TaskM {
                                                 case WATTING:
    PRIORITY = 3:
                                                     printfSerial("%d: waiting...", id);
    STACK = SHARED;
                                                     break:
    SCHEDULE = FULL;
                                                 case RUNNING:
                                                     printfSerial("%d: running...", id);
    AUTOSTART = FALSE:
                                                     break;
    ACTIVATION = 1:
};
```

#### 08. GetTaskState

```
TASK(Task1)
                                               TASK(Task2)
    TaskType id;
                                                   TaskType id;
    printfSerial("Task1 Begins...");
                                                   printfSerial("Task2 Begins...");
    printState(Task1);
                                                   printState(Task1);
    printState(Task2);
                                                   printState(Task2);
    mdelay(3000);
                                                   mdelay(3000);
    ActivateTask(Task2);
                                                   GetTaskID(&id);
    printState(Task1);
                                                   printfSerial("Task ID = %d...", id);
    printState(Task2);
                                                   printfSerial("Task2 Finishes...");
    mdelay(3000);
                                                   ChainTask(TaskM);
    GetTaskID(&id);
    printfSerial("Task ID = %d...", id);
    printfSerial("Task1 Finishes...");
    ChainTask(TaskM);
```

#### 08. GetTaskState

- Task 상태 변화 관찰
- 우선순위, Activation 패턴 변화의 영향은?

```
-1:
8: Task1 Begins...2: running...4: suspended...
1:
2:
3: Task2 Begins...2: ready...4: running...
4:
5:
6: Task ID = 4...Task2 Finishes...2: ready...4: suspended...2: running...4: suspend ed...
7:
8:
9: Task ID = 2...Task1 Finishes...2: suspended...4: suspended...
10:
11:
12:
13:
14:
```

## **Questions**
